Route 3, Box 535
CANBY, OREGON

Dear Iris Friends,

Whooray . . . Spring is just around the corner and it's iris time again. There is already activity in the garden here. The silly little Reticulatas, the early Juno iris Sindpers, and the Stylosas all are showing color and bloom. What charming things so early in the season but they just herald bigger and better things to come.

I guess it's just mans nature to wish ones life away, but from fall to spring, all we think about are the new additions, the selected seedlings, and all the interesting guests that we have to bloom. And I guess I am no exception. We have all of them here this year. And what new iris; Chet Tompkin's new red AHOY, his fine plicata JUBLIATION, SMILING LIGHT, MOULIN ROUGE, and several others; Fred DeForest's TALL CHIEF, GRAND TETON, LULA MARGUERITE, his stunning IRMA MELROSE, and not the least his extra extra NIGHT 'N DAY; Henry Sass's new REVEL, ROSY VEIL, SKY CRYSTAL, and our cover iris CINNAMON TOAST; Dave Hall's lovely SWEET REFRAIN; Tell's JUNE MEREDITH and a host of other things. What prospects for a great season.

We are also awaiting with considerable anxiety the bloom of many of our numbered seedlings. 55-3 the red that has been so well liked we have named "QUADRILLE" and 55-11 that gay patterned varagata we have dubbed "SCALLAWAG". Our big flaring cream plicata recessive 55-64 has been named "BRIGHT STARLIGHT" and we hope to have enough stock of it for 1958. We have several others that we think are winners. Ask to see them if you come our way. We will also be blooming two crops of seedlings this year. Those that didn't bloom in 1956 because of the freeze and our normal 1957 crop. If providence is with us we should have lots of bloom.

As you will have undoubtedly noted, this is our first venture into the color catalog field. A step that must be taken gradually. We are quite pleased to be able to add color and I hope it adds to your catalog shopping pleasure. Better still, we would like to see you here at the gardens during the bloom season or at any season. We are not hard to find, being directly behind the Clackamas County Fair Grounds at the eastern edge of Canby. Our garden address is 866 N. E. Wait Ave. Incidentally, both Fred DeForest's Irinoll and Chet Tompkin's Fleur De Lis Gardens are within 5 minutes easy riding distance from here. Between our three gardens practically everything good in iris can be seen.

We will be looking forward to seeing or hearing from you.

Sincerely,

Ron Beattie

Our 1957 Introductions

SCALLAWAG (Beattie 1957) E. M. 38 in. This gay scamp was an unexpected by-product of our varagata breeding. The flowers have a delightfully ruffled, flaring form that goes well with and seems a part of its gay and cheery color combination. The standards are deep golden yellow and the falls are of the same color with a full almost laid on pattern of rich red brown that vividly follows each vein in the fall to give a complete, almost plicata-like pattern of the red over the yellow. A clean border of yellow around the ruffled edges of the falls helps to emphasize this pattern and the overall result is seen in the finished flowers which have a brightly gay and care-free appearance that immediately catches everyones eyes with its scallawaggish, come over here, I dare you look. The tall stalks have exceedingly good branching with the first branch beginning in the foliage, and the others placed on the stalk well in proportion to the first. The placement is good and the many buds are of rich, golden yellow with a brown flush and apple green midrib, making the plant a thing of beauty even before bloom. This is one iris we couldn't ignore and

most of our garden visitors returned to it again and again. A good increaser and very vigorous.

55-11 (Good News x ((Old Parchment x Golden Majesty) x Sib.) X (Black and Gold x Cascade Splendor) --- **Net 25.00**

QUADRILLE (Beattie 1957) E. LM. 38 in. It is with great pride that I introduce the first Hermit Thrush seedling of our breeding. Quadrille has large flowers of deep carmine red that are slightly on the bitone side, the standards being perhaps a shade lighter than the falls. The carriage is very flaring and the falls are gently ruffled. The hafts are smooth and clean with deep yellow beards and the broad, full-formed petals are of extra heavy substance. The stalks are tall and extremely well branched, each carrying ten or more well spaced flowers. It has a long season of bloom, producing flowers from early to late midseason. A fine grower and a good increaser. Quite fertile pollen but rather difficult to pod. Quadrille has been much admired in our garden as a seedling and many judges urged me to introduce it.

55-3 (Hermit Thrush X Ebony Echo) ----- **Net 20.00**
